

CAMPUS INFORMATION · SERVICE DESIGN PROPOSAL

The Signal in the Noise

You're Informed. But Are You Updated?

THE CURRENT STATE

Freshers are asked to monitor the whole campus at once

Useful information arrives everywhere — and nowhere feels complete.

Class groups

Course messages and timetable changes.

Departments

Deadlines, workshops, scholarships.

Societies

Events, recruitment, opportunities.

Hostels

Local notices and peer updates.

Email lists

Official reach without a shared feed.

The result: repeated, incomplete, outdated, or buried messages — leaving students to decide what matters and what to trust.

THE PROPOSED INFORMATION LAYER

One trusted campus information layer

Keep existing channels for conversation and reach. Add one structured companion that collects, classifies, updates, and surfaces what students need.

Type Assignment Deadline Data Structures Due tomorrow	Type Upcoming Event AI & Innovation Workshop 18 Sept	Type New Opportunity College Hackathon Registration open	Type Society Recruitment Tech Society Applications open

Every item carries

Type

Timing

Action

[Add to Calendar] [View Details] [Register] [Save]

One companion connects information to daily routines

The layer becomes useful when students can move from notice to next step in the tools they already use.

Google Calendar

With explicit permission, add selected assignments, events, meetings, workshops, and application deadlines. Keep colors, reminders, and editable sync in the student's control.

WhatsApp

Read only explicitly connected groups. Extract dates, owners, links, and actions; detect duplicates; preserve the original message for context.

Attendance

Show each class, attended and missed sessions, current attendance, timetable context, and reminders when attention is needed.

Consent-led by design: students choose what connects, what syncs, and what can be disconnected.

FROM MESSAGE TO ACTION

Every update follows a controlled path from message to action

Connect

Approved campus sources and opted-in groups feed the system.

Structure

The system captures the date, deadline, location, audience, owner, and next step.

Distribute

Students see one current version with targeted alerts only when needed.

Close the loop

Expired items leave the active feed and remain searchable as a record.

Trust controls

Use role-based access, clear retention rules, visible ownership, and an audit trail for changes.

Student controls

Keep private conversations out of the feed and give students easy disconnect and reporting controls.

A FOCUSED PILOT

Start with one campus, one semester, and a focused pilot

01

Scope

First-year students, a small set of departments, selected societies, and opted-in WhatsApp groups.

02

Prioritize

Deadlines, timetable changes, events, scholarships, workshops, opportunities, calendar sync, and attendance visibility.

03

Measure

Fewer duplicates, faster action, clearer ownership, calendar adoption, and student confidence in what to trust.

Decision

Align on pilot owners, integration permissions, first categories, and the simplest path to launch.

TEAM

DORAEMON KE GULAM

1. AYUSHI KUMARI — IT Branch
2. ALISHA YASEEN — IT Branch
3. DHRUVI BHATIA — IT Branch

One trusted signal can turn campus noise into confident action.
